

Connect the Dots

Can you figure out who this is? Connect the dots with the right numbers and you'll see who's crawling around!

Answer: mollusk

Want to know more about mollusks?

- * There are different kinds of mollusks.
- * A mollusk is made of two parts - the shell is on the outside and the snail (the part that's alive) lives inside.
- * The snail can't ever come out of the shell - it's stuck there for good.
- * Mollusks are really important because they keep the water clean and are food for birds, turtles, crabs and other sea creatures...so don't take them home unless the shell is empty!
